

Total Access Startup

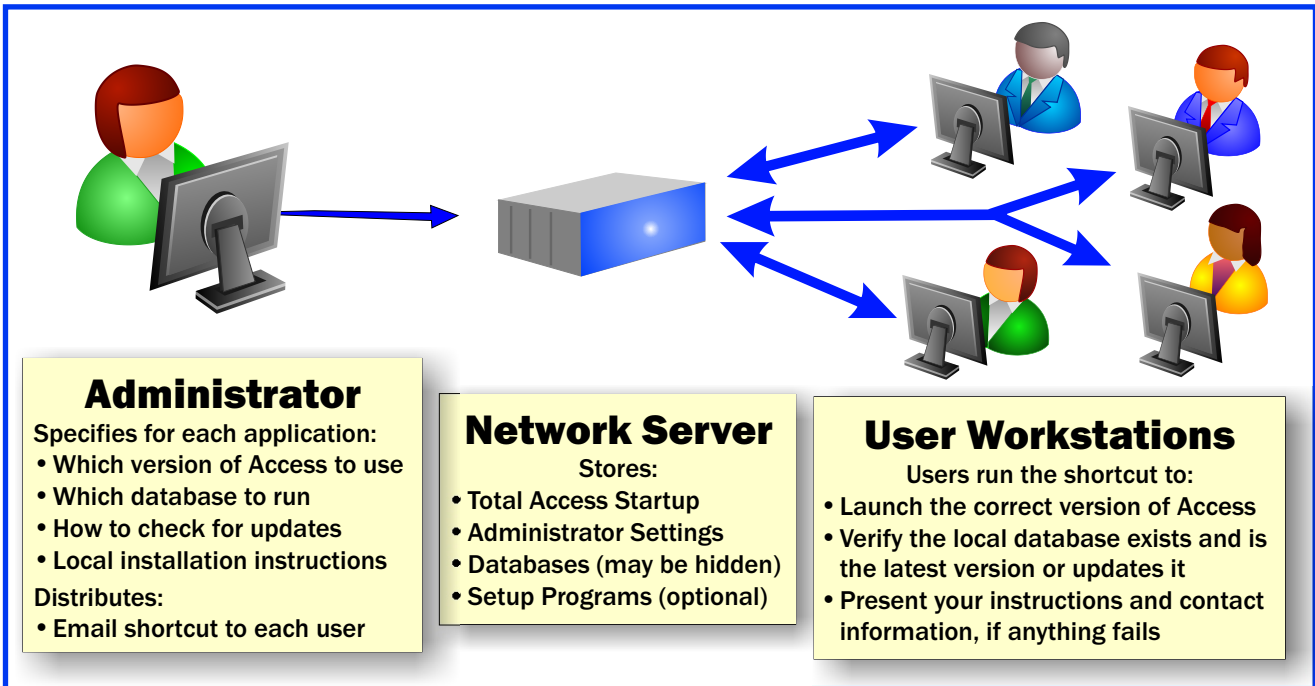

New Version for Access 2010

FREE TRIAL

Centrally Manage Access Databases and Versions

Start the Right Version of Microsoft Access and Your Database Every Time!

Total Access Startup eliminates deployment hassles by letting you centrally manage your Access databases. Give users a simple shortcut to launch them, and easily deploy front-end databases while ensuring users have the latest updates. Users don't even need to know the database name! Migrate to new versions of Access while safely running legacy Access applications.

New Features!

- Support the 32 and 64 bit versions of Access 2010 to let you control which one your users should use
- Launch Access Data Projects (ADPs), MDBs, and ACCDBs
- Support multiple Access versions for a database with preferred and acceptable range of Access versions
- Reference User Folders such as My Documents for local file installation
- Easily run Access applications using Windows Server RemoteApp to support multiple user sessions on one PC
- EXE files are digitally signed to support user permissions

Zero Deployment Footprint

One copy supports all the databases on your network.

“Total Access Startup eases Access deployment. Use the tool to launch a database with the appropriate version of Access every time.”
