Find Differences Between Databases or Objects

Pinpoint Every Change in Your Databases

Whether it's two databases or two objects in one database, Total Access Detective gives you precise details of what's different. Eliminate manual inspection and uncertainty to see modified properties, fields, indexes, controls, sections, macros, and module code. Even compare data and combine records from two tables into a new one.

Compare Tables for
Design and Data
Differences

Perform Smart
VBA Module
Comparisons

New Features!

- Supports Access 365/2024, 2021 and 2019 (32 and 64-bit)
- Detect new Access properties, data types & VBA/macro syntax
- Top-level filters to quickly see new or deleted fields, indexes, controls, groups, sections, etc.
- Database Comparison results have more filters to see changes by object type and/or name
- Launch the Database Comparison from the current database add-in
- Improved summary and filtering of Two Database comparison results
- Improved user interface
- New help file and user manual

“Final Verdict: I am once again quite confident in putting my stamp of approval on this tool. If you are in a situation in which you quickly need to identify all the differences between multiple databases, FMS' Total Access Detective will make short work of the job at hand! ... A very nice, easy to use and most importantly, effective and thorough tool”
Daniel Pineault
Microsoft Access MVP Review

Total Access Detective understands VBA and doesn't get confused if you add, delete, or resort procedures. Unmatched procedures are listed, and lines in identical procedure names compared. Optionally ignore case, blank lines, indentations, comments and line numbering to quickly identify exactly what changed in the “real” code.
